SUMMARY

Full Stack Developer with experience developing production web applications using Java Spring Boot, Python, JavaScript, React.js, Node.js, Express.js, PostgreSQL, MySQL, MongoDB, REST APIs and SQL. Built production-ready full-stack applications featuring authentication, AI integration, database-driven systems, and responsive user interfaces.

EXPERIENCE

Software Engineer Intern

June 2026 – August 2026

Spherical Insights LLP, Pune

On-site

- Independently architected and built a full-stack content publishing platform (CMS) using Java Spring Boot, Thymeleaf, and MySQL, unifying seven content types (blog, news, interviews, case studies, and more) under a single content-type-driven data model, delivered solo.
- Developed frontend interfaces and backend workflows for market research portals, integrating UI components with server-side logic and relational database operations.
- Contributed to a multilingual report filtering feature enabling database-driven content discovery across 14 languages.

TECHNICAL SKILLS

Languages: C++, JavaScript, SQL, Java, Python

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, Spring Boot, Thymeleaf, JDBC, REST APIs

Databases: PostgreSQL, MySQL, MongoDB, Supabase, pgvector

Authentication: JWT, Google OAuth 2.0, Supabase Auth

AI Integration: Claude API, OpenAI Embeddings API

Tools & Deployment: Git, GitHub, Postman, Vercel, Render

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

SPPU Study Hub | sppustudyhub.in | GitHub | Node.js, PostgreSQL, Claude API, OpenAI Embeddings

Mar 2026 – Present

- Debugged a production authentication failure caused by a JWKS/shared-secret mismatch that silently rejected valid user sessions despite a fully passing test suite.
- Identified the root cause as a gap in test coverage rather than application logic, and corrected the token verification flow to restore reliable session handling.
- Eliminated an N+1 request pattern in the dashboard by consolidating per-subject API fan-out into a single batched SQL endpoint, cutting requests per page load from approximately 20 to 5 and reducing concurrent database queries fivefold.
- Integrated Claude API for AI-powered exam explanations with semantic embedding-based response caching, reducing repeated AI API calls by 65–70% and controlling inference cost under real usage limits.
- Designed dual independent auth systems—JWKS/ES256 OAuth for users and a separate JWT scheme for admin—with all authorization enforced server-side from verified token identity; attracted 4,300+ visitors and 30,000+ page views within 29 days of launch, growing to 500+ registered users overall.

Farmsense AI | Live | GitHub | React.js, Node.js, Express.js, MongoDB, Claude Vision API

Mar 2026 – Apr 2026

- Built a full-stack agriculture platform combining crop analysis, market prices, weather data, and farm financial tracking.
- Integrated the Government of India Agmarknet API to provide mandi price data and generate contextual sell-timing recommendations.
- Implemented image-based crop disease analysis using Claude Vision API, returning structured diagnosis, severity, treatment steps, and organic alternatives.
- Built a farm dashboard for expense tracking, yield analytics, profit/loss calculation, and data visualization using Recharts.
- Integrated weather forecasts with contextual recommendations for irrigation, spraying, and harvesting decisions.

EDUCATION

JSPM's Jayawantrao Sawant College Of Engineering

Aug 2023 – June 2027

Bachelor of Engineering in Information Technology | CGPA: 8.28

ACHIEVEMENTS

LeetCode: Solved 250+ algorithmic problems covering arrays, linked lists, trees, graphs and dynamic programming.

Codolio: Solved 100+ problems across multiple coding platforms.
